

Three-tier scope and overall layout (concept)

Coordinated research area → overall design area → three key nodes

PROVISIONAL — concept geometry only; verify boundary, rights, traffic and safety before implementation.

Three nodes: section, programme and operations (concept)

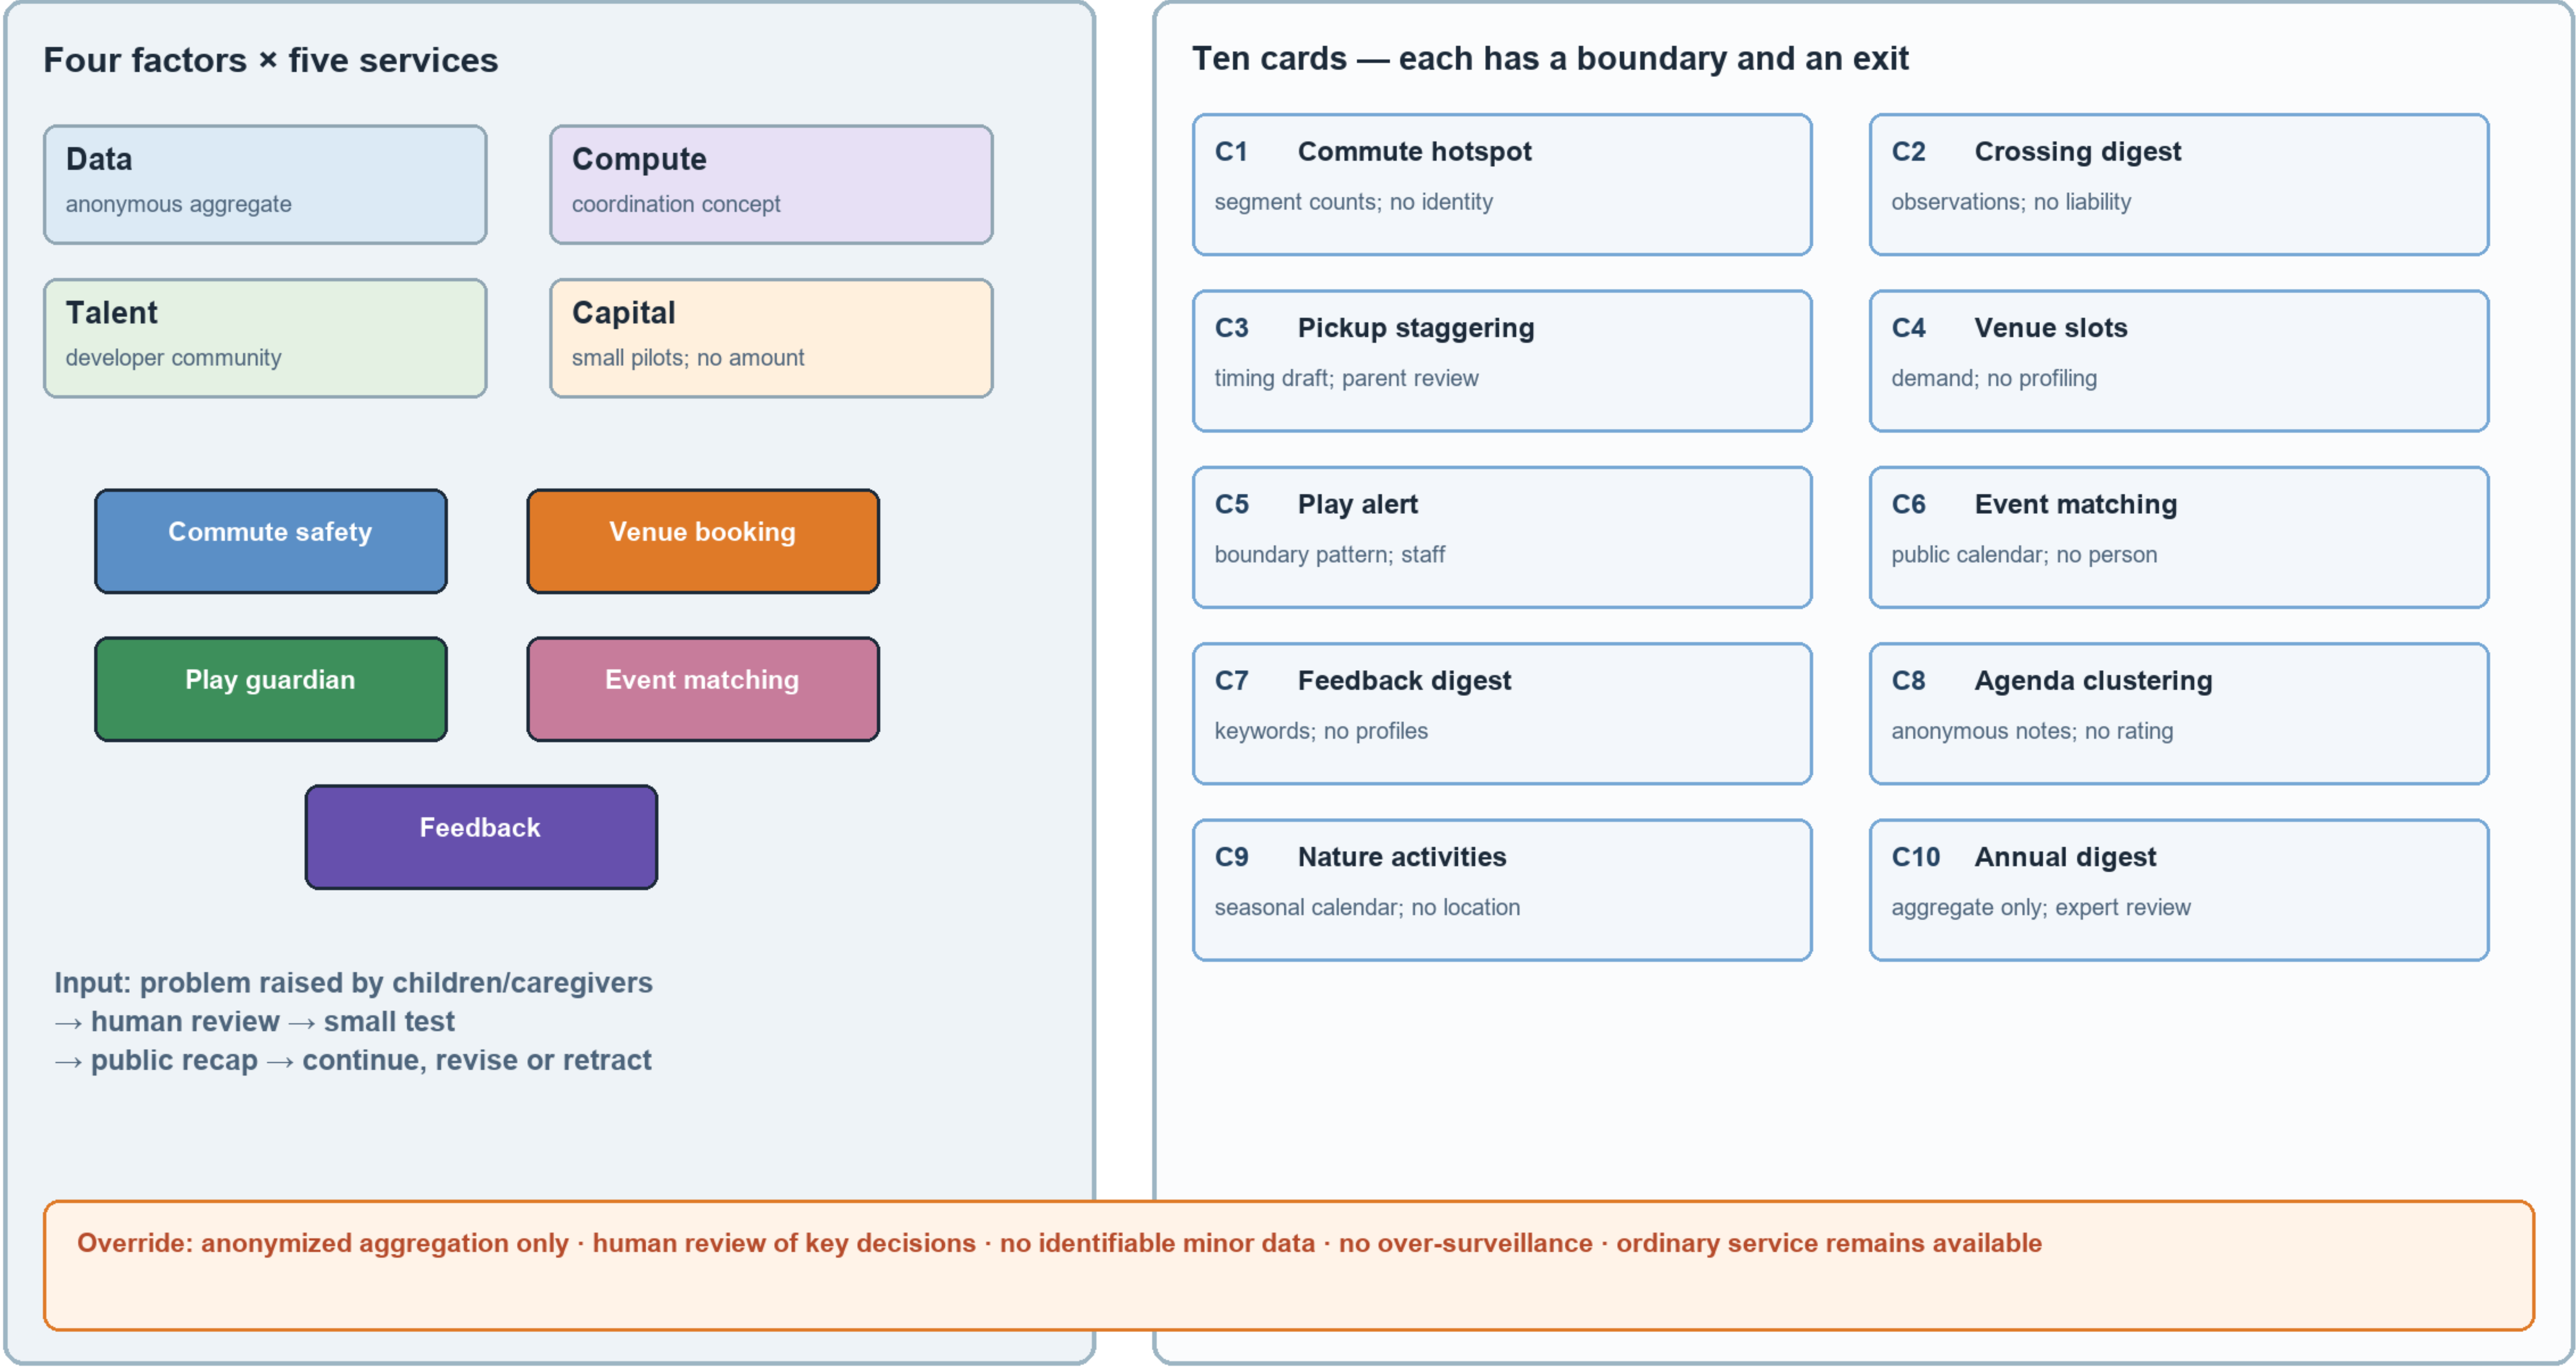

1 · Safe school route	2 · Child-friendly playground	3 · Family service stop
Zhongzhi side	AI Origin Community side	Dazhongsi side
● Pedestrian priority / calm crossing ● Pickup point + shade seat ● School + community + volunteers	● Unpowered play / sand-water ● Nature observation / caregiver sightline ● Community + nature mentor	● Nursing / changing / reading ● Staffed desk + paper/phone path ● Sub-district + qualified service body
Input → human gate → reversible output Anonymous aggregates / public calendar → service desk and observation → stop, retract, or keep ordinary service	Input → human gate → reversible output Anonymous aggregates / public calendar → service desk and observation → stop, retract, or keep ordinary service	Input → human gate → reversible output Anonymous aggregates / public calendar → service desk and observation → stop, retract, or keep ordinary service
Gate: rights, safety, access, staffing, privacy	Gate: rights, safety, access, staffing, privacy	Gate: rights, safety, access, staffing, privacy

PROVISIONAL — field surveys and professional reviews decide every implementation gate.

Evidence, ecosystem and metric gates

The system links six global AI ecosystem mechanisms to ten scenario cards, three decision gates and a reversible ordinary-service fallback.

AI innovation ecosystem + scenario-card index (concept)

Metric audit — display (concept geometry)

Exact geometry values are never silently replaced by rounded labels.

Rule: audit_value/value remains the geometry result; display_value_numeric is rounded by the recorded rule; display_value is the human label. Ratios use ratio units in machine fields and percent labels only in the display.

Trigger: official boundary, green-space or public-space data release → recompute numerator, denominator, audit value and every display field together.

PROVISIONAL — values are design-model evidence, not official planning conclusions.
