

WEAVE-STUDY LOOP • A0 concept board

All area/ratio values are approximate and provisional; no planning precision is implied.

Overview

Core metric evidence

Human-facing values are deliberately approximate; machine precision stays in metrics.json.

Overall design area

~1,140 ha

(~11 sq km level)

Green ratio

~12%

Public-space ratio

~0.5%

Count metrics

PROVISIONAL • participant model • not officially issued • recompute after official geometry/data

Formal area/ratio values are geometry-derived; no planning precision is implied.

Core metrics

PROVISIONAL • participant model • not officially issued • recompute after official geometry/data

Three node prototypes

A service chain with a visible exit, privacy boundary, and human fallback at every node.

HALL / 织学馆

Shared-study hub • quiet pods

Scenario anchors: SC-01 / SC-02 / SC-06

• Exit: stop or hand over when safety or service gates fail

• Privacy: aggregate booking fulfilment only; no individual tracking

• Human fallback: paper booking + staffed desk

VALLEY / 学研谷

Study community • workshop + forum

Scenario anchors: SC-03 / SC-05 / SC-09

• Exit: pause the pilot when complaints stay unresolved

• Privacy: anonymised ranges; no person-level profiling

• Human fallback: walk-in sign-up + staffed host

NIGHT / 夜读室

Evening study • help point + classes

Scenario anchors: SC-07 / SC-08 / SC-10

• Exit: close the night slot if duty or safety preconditions fail

• Privacy: public-area safety review; no identity tracking

• Human fallback: phone/help desk + paper route

PROVISIONAL • participant model • not officially issued • recompute after official geometry/data

Node envelopes are conceptual; all operations remain subject to professional and human review.

Key-area prototypes

Slow-mobility and blue-green loop

Route logic, not a road or rail engineering proposal

HALL / 织学馆

VALLEY / 学研谷

NIGHT / 夜读室

shade • reading edge • accessible pause • help point

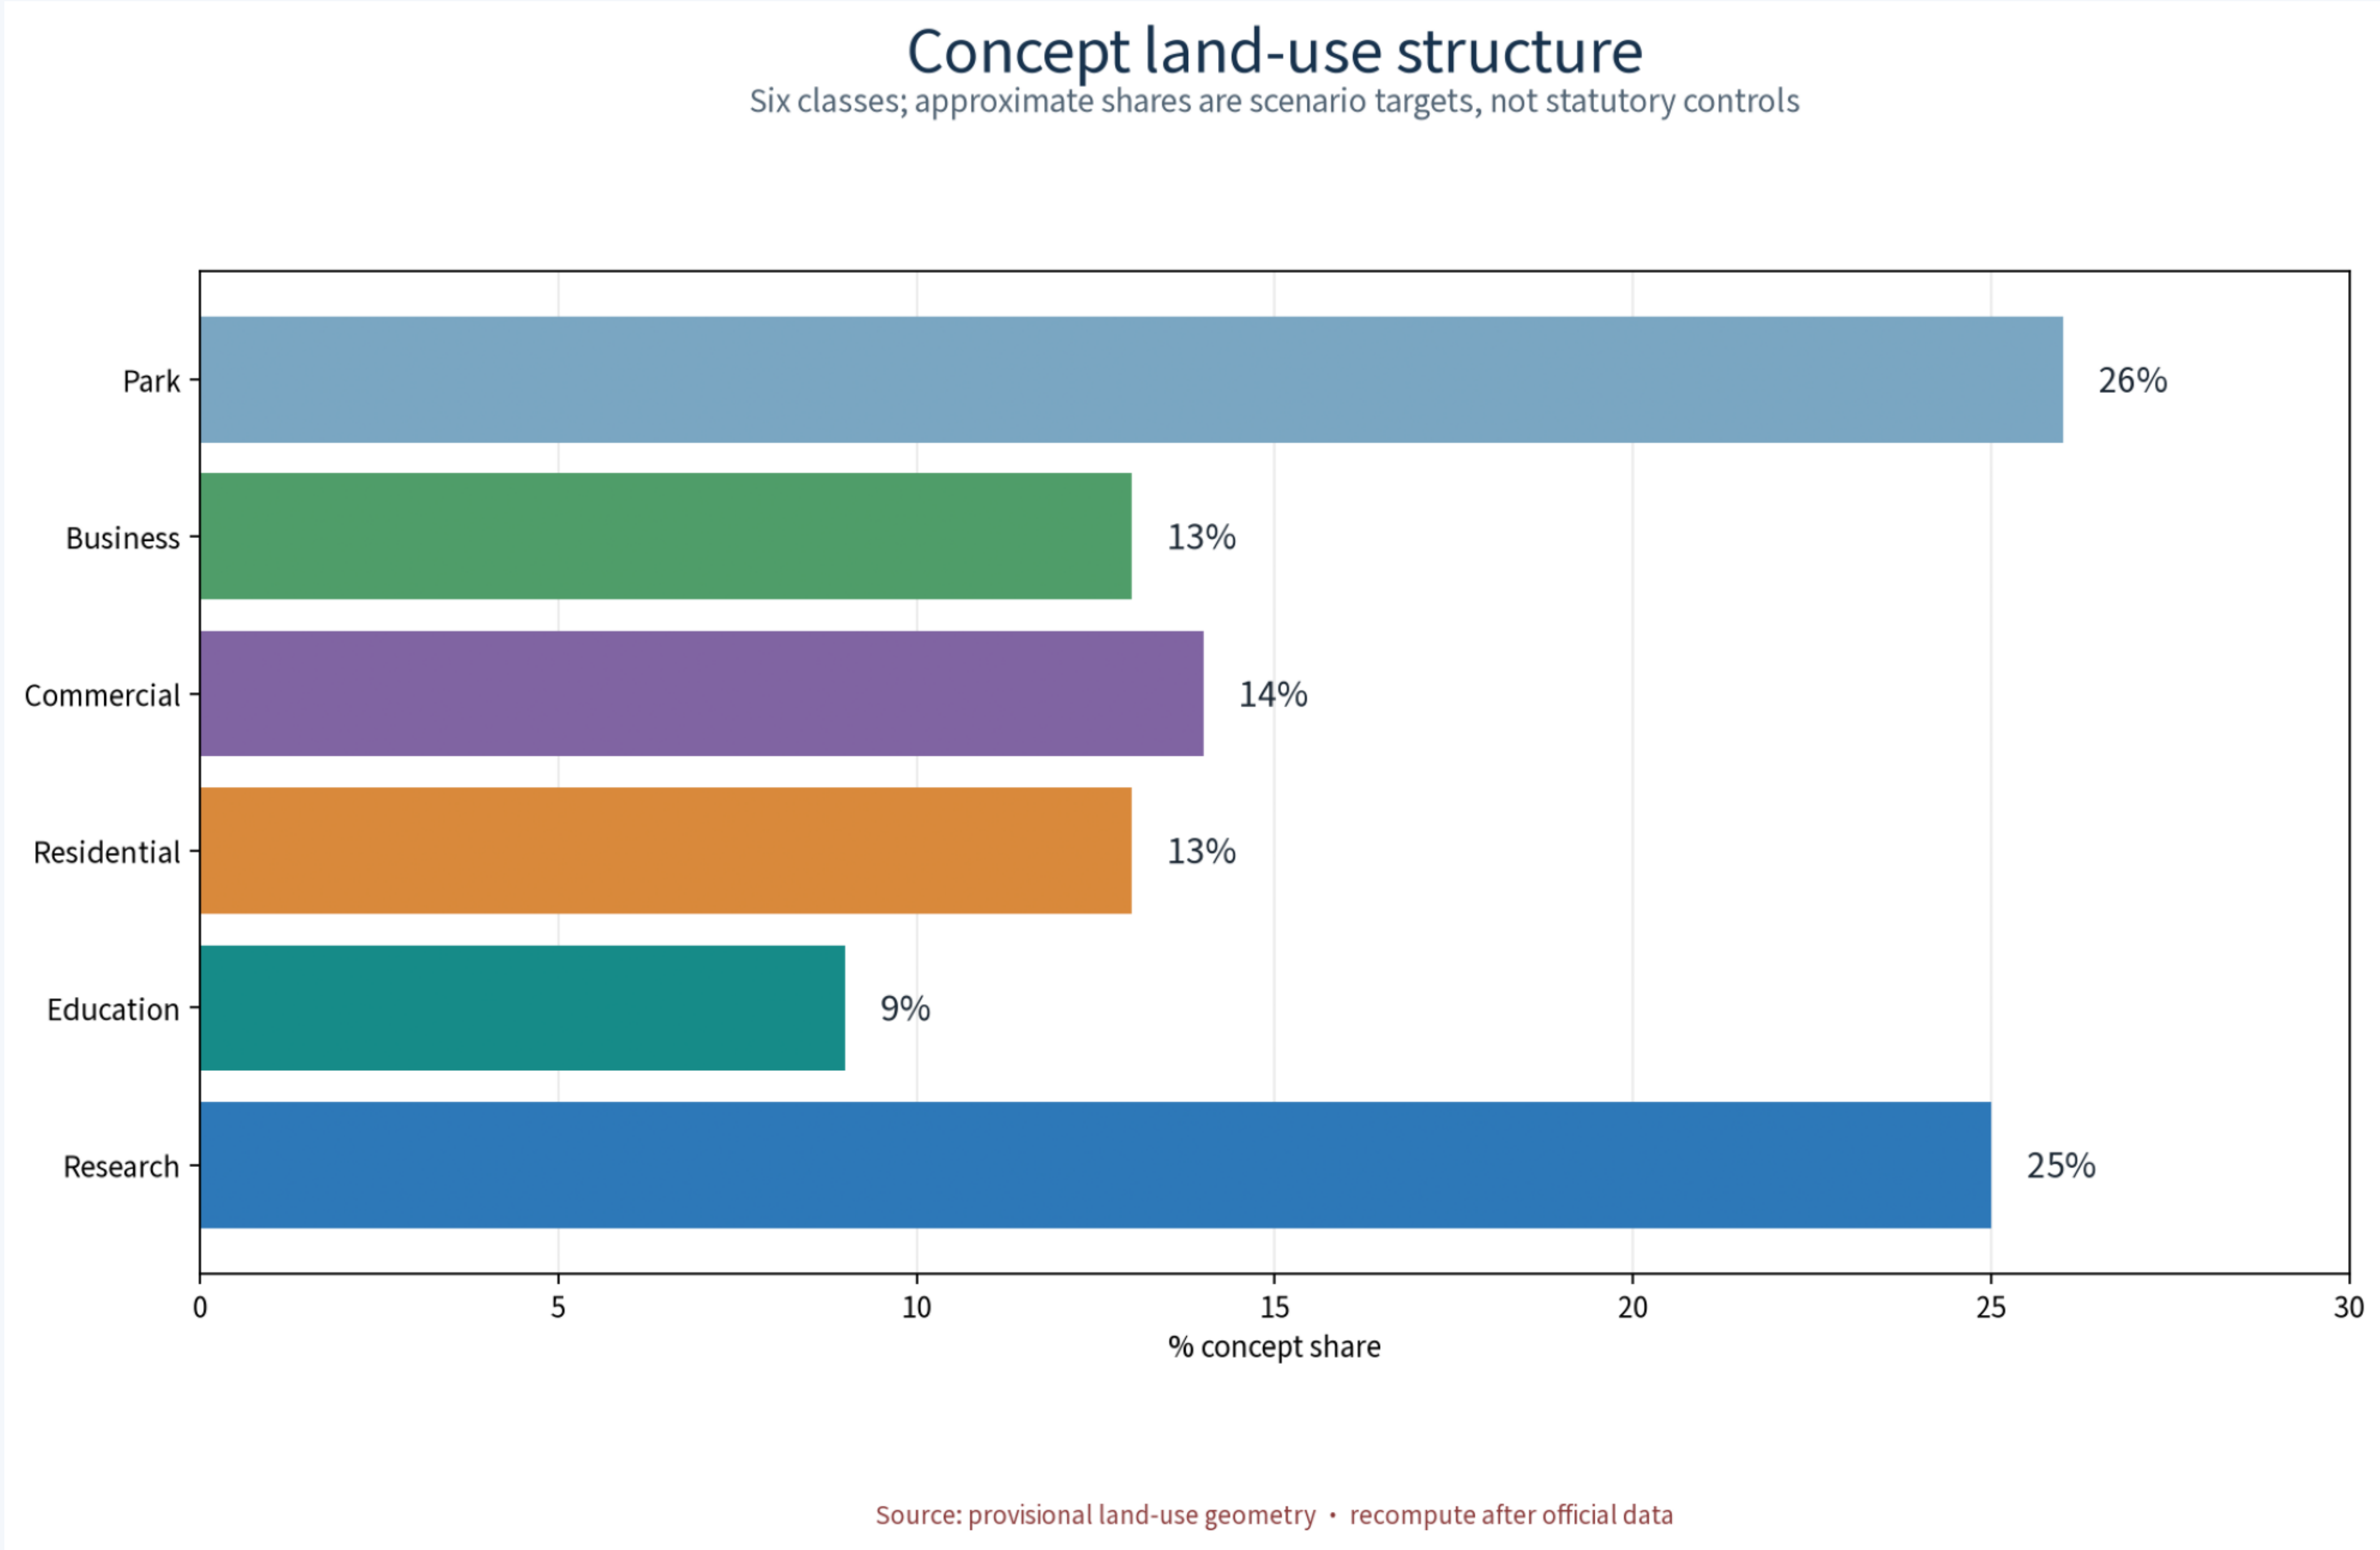

Provisional route; official rail, fire, heritage and municipal conditions govern any later study

Slow mobility

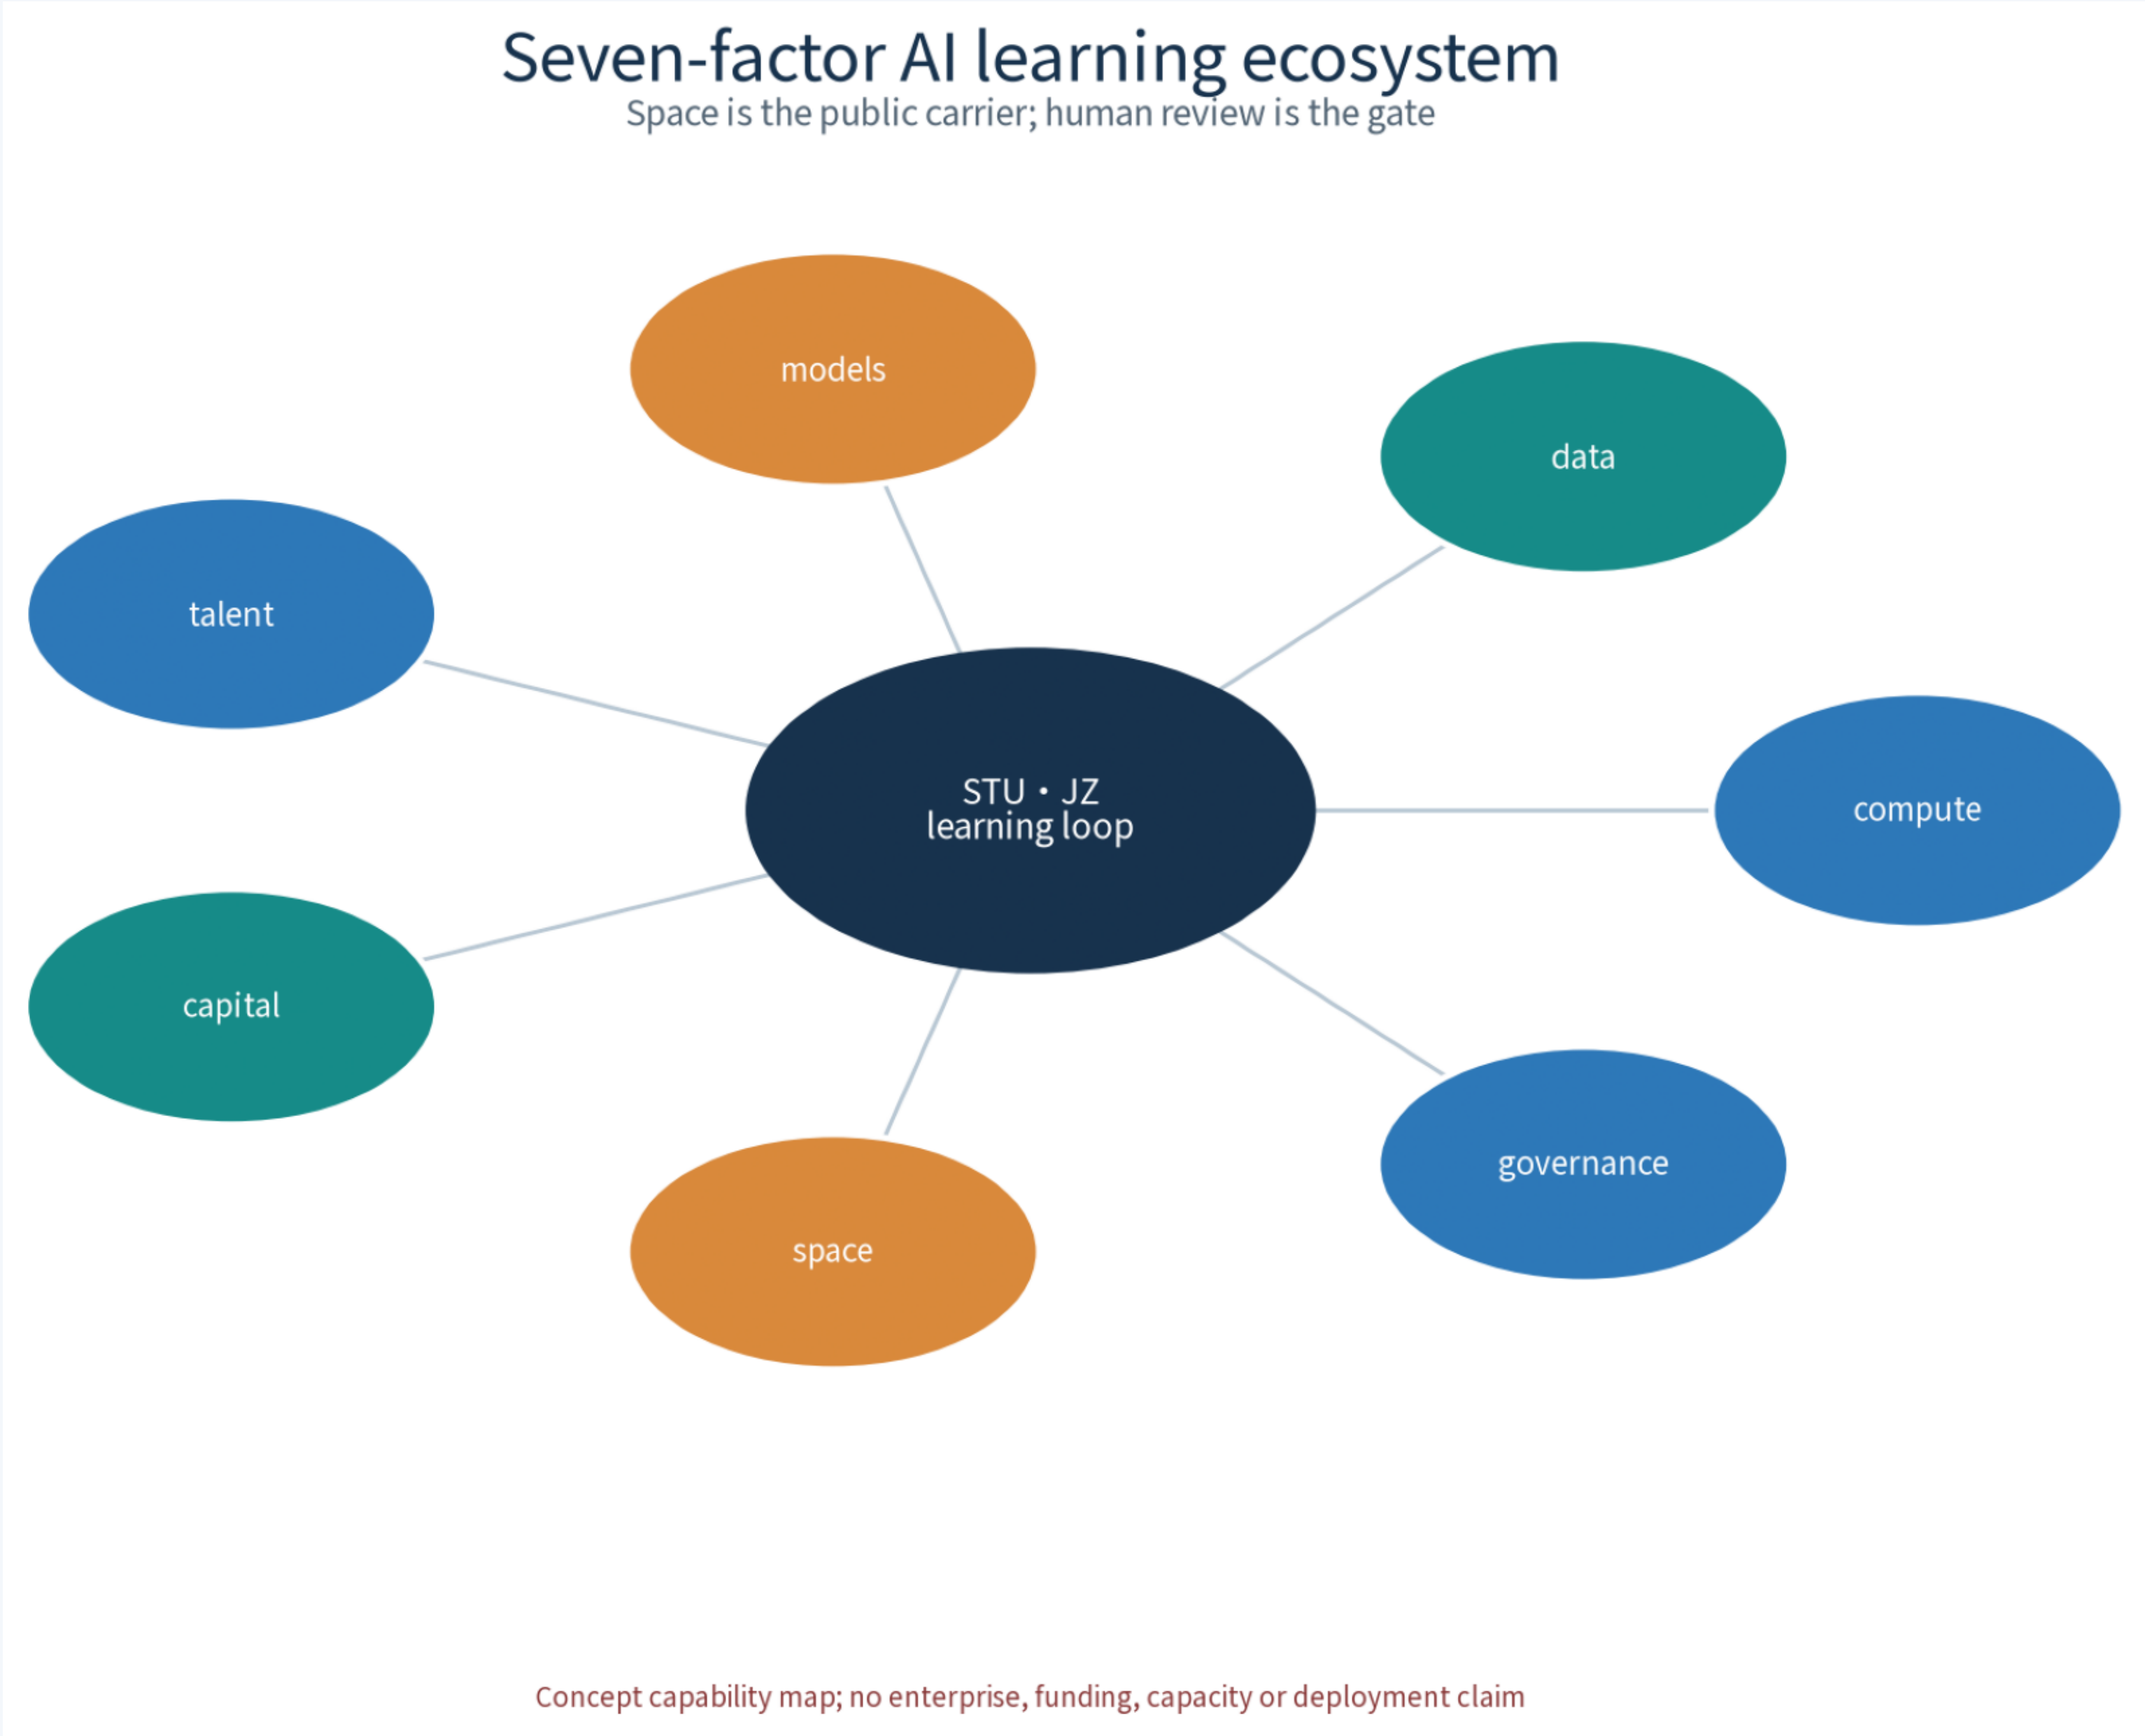

WEAVE-STUDY LOOP • evidence and operation

All area/ratio values are approximate and provisional; no planning precision is implied.

Land-use structure

AI ecosystem
