

FIT • JZ: Public Fitness and Smart Sports Facility Network

English A0 board | a reversible public AI test network linking heritage, healthy mobility and human-reviewed services

PROVISIONAL / CONCEPT MODEL — not an approved plan, statutory control, engineering design, medical advice, procurement commitment or investment document

Spatial system and node logic

A human-reviewed AI mechanism

Three positioning statements

Heritage becomes a cultural interface; sport becomes an everyday AI experience; the belt becomes a testable innovation network with reversible governance.

One heart • one ring • one corner • one chain

A staffed service heart, a low-speed walking/cycling ring, a neighborhood sports corner and a Jingzhang-linked chain connect communities, workplaces, stations and blue-green spaces.

Five functions

Full-stack AI innovation; a world-class ecosystem; AI+ scenario enablement; an intelligent active city; and a platform for global AI governance discourse.

Operating rule

Anonymous aggregate need → model/rule candidate → spatial touchpoint → human decision → public review → pause or exit. The model never makes an autonomous medical or safety decision.

Delivery contract

10 scenario cards • 3 industry test protocols • 7 mechanism references • 3 node decision cards • 8 user groups • RACI • KPI • stop/exit conditions • health-data minimization
