

1. Design basis and system

FIT • JZ | English A3 booklet | substantial English counterpart of the Chinese delivery

PROVISIONAL / CONCEPT MODEL — conceptual and provisional; not a statutory, engineering, medical, procurement or investment document

FIT • JZ responds to the Century Jingzhang Cultural Belt, the Urban AI Life Experience Belt and the AI Integrated Innovation Belt. It translates those identities into a small, reversible public test network rather than a fixed construction promise.

What this page makes testable

- Three positioning statements: heritage as cultural interface; sport as everyday AI experience; a testable innovation belt with reversible governance.
- Five functions: full-stack innovation, ecosystem building, AI+ scenarios, an intelligent active city and global governance dialogue.
- Spatial grammar: one heart, one ring, one corner and one chain.

Boundary and evidence

The research area, overall design area and key detailed-design areas are different scales. The geometry shown here is a reproducible concept model only; it is not an official redline.

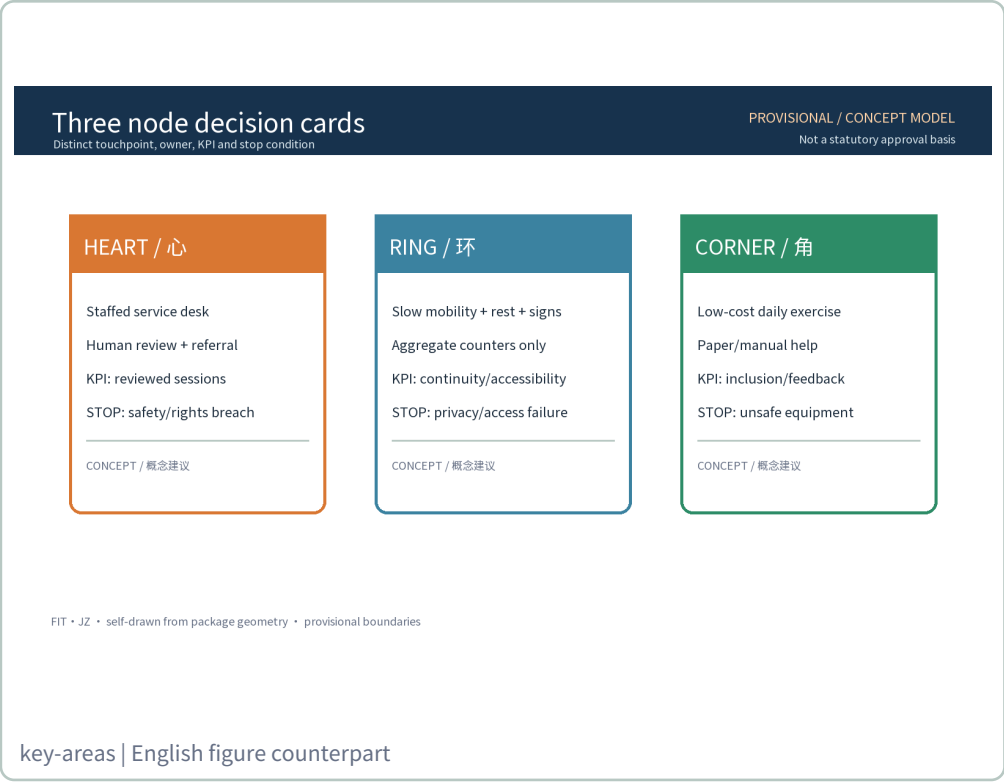

Rights and confidence: all figures are self-drawn; sources.json records independent URLs, licenses and prohibited uses. Official boundary, ownership, engineering, capacity, budget, clinical validity and operating relationships remain unknown or provisional.

2. Three areas, two wings and node decisions

FIT • JZ | English A3 booklet | substantial English counterpart of the Chinese delivery

PROVISIONAL / CONCEPT MODEL — conceptual and provisional; not a statutory, engineering, medical, procurement or investment document

The network connects Beijing AI Origin Community, Zhongzhi Park AI Autonomous Innovation Acceleration Area and Dazhongsi AI Industry Cluster Area with the Zhongguancun Science-Service Wing and Xiaoyuehe Scenario-Enablement Wing. Beiwei Community, Future Science City, Huairou Science City, E-town and the Beijing–Tianjin–Hebei interface are explicit interfaces, not implied partnerships.

What this page makes testable

- Service heart: staffed desk, inclusive training, health referral and model-review room.
- Slow ring: walking/cycling, rest points, multilingual interpretation and anonymous aggregate counters.
- Sports corner: low-cost daily exercise, child/older-adult zones, manual assistance and complaint access.

Boundary and evidence

Every interface has a concept role and a boundary: direction only, pending co-design; no promised tenants, suppliers, venues, resources or regional cooperation.

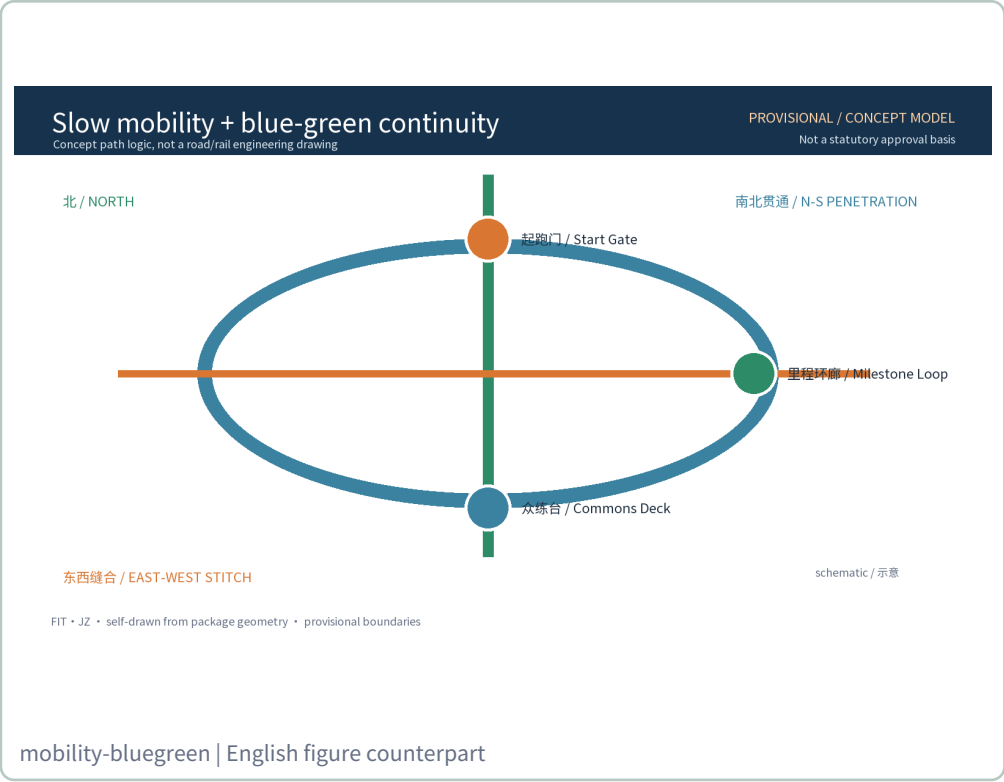

Rights and confidence: all figures are self-drawn; sources.json records independent URLs, licenses and prohibited uses. Official boundary, ownership, engineering, capacity, budget, clinical validity and operating relationships remain unknown or provisional.

3. Mobility, blue-green space and public realm

FIT • JZ | English A3 booklet | substantial English counterpart of the Chinese delivery

PROVISIONAL / CONCEPT MODEL — conceptual and provisional; not a statutory, engineering, medical, procurement or investment document

The ring is a slow-mobility and service-continuity concept, not a road, rail or municipal engineering design. East–west stitching follows Jingzhang railway memory; north–south penetration links neighborhoods, jobs, stations and blue-green spaces.

What this page makes testable

- Three original working landmarks: Start Gate, Milestone Loop and Commons Training Deck; names are not official brands.
- Component library: shade, seating, tactile guidance, bilingual signs, timing marks, privacy notices and removable sensors.
- Cultural导视 is bilingual and accessible; international communication explains the mechanism without claiming official status.

Boundary and evidence

Path alignments, emergency access, lighting, sanitation, bus, bicycle and station interfaces require responsible professional verification before any pilot.

Rights and confidence: all figures are self-drawn; sources.json records independent URLs, licenses and prohibited uses. Official boundary, ownership, engineering, capacity, budget, clinical validity and operating relationships remain unknown or provisional.

4. Reuse-first structure and provisional metrics

FIT • JZ | English A3 booklet | substantial English counterpart of the Chinese delivery

PROVISIONAL / CONCEPT MODEL — conceptual and provisional; not a statutory, engineering, medical, procurement or investment document

FIT • JZ retains and adapts before replacing. It uses removable, low-impact interfaces and avoids inventing FAR, height, demolition, road redlines, bridge works, municipal capacity or investment numbers.

What this page makes testable

- Site area: 11,412,825.386 sqm (provisional).
- Green ratio: 12.5671% (provisional).
- Public-space ratio: 0.4569% (provisional).
- Unknowns remain unknown: ownership, approvals, engineering, capacity, vendors, clinical validity, budget and acceptance.

Boundary and evidence

Formal core metrics are geometry-derived concept values and must be recalculated when official GIS is released. Displays round values but retain exact data-value fields.

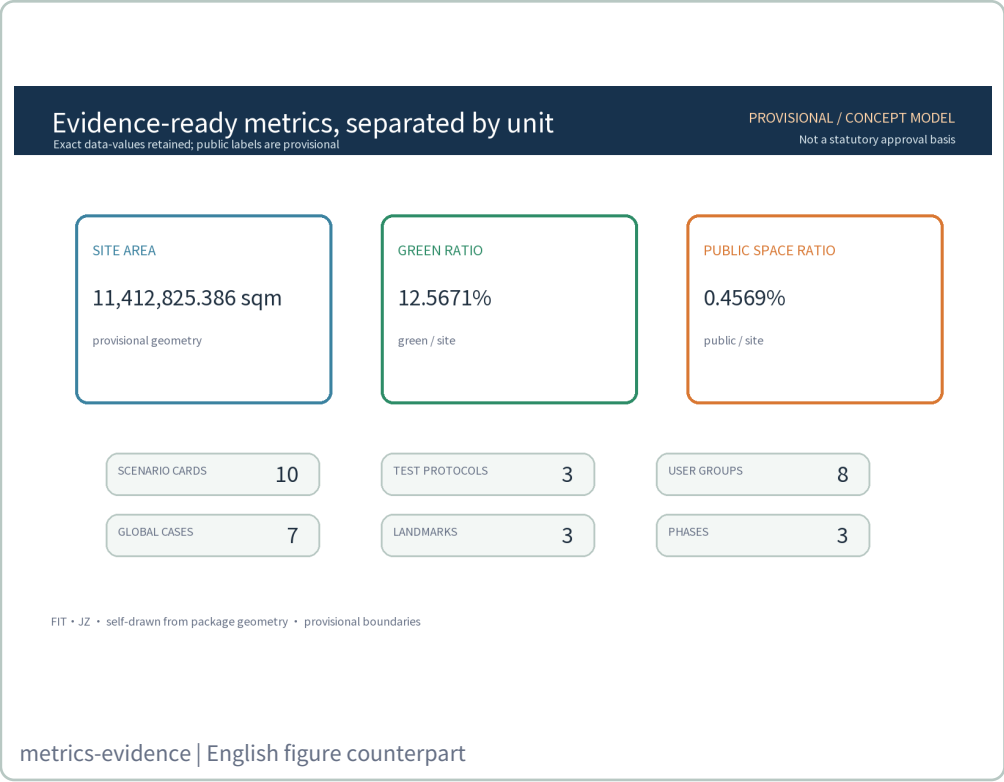

Rights and confidence: all figures are self-drawn; sources.json records independent URLs, licenses and prohibited uses. Official boundary, ownership, engineering, capacity, budget, clinical validity and operating relationships remain unknown or provisional.

5. AI ecosystem, evidence and test protocol

FIT • JZ | English A3 booklet | substantial English counterpart of the Chinese delivery

PROVISIONAL / CONCEPT MODEL — conceptual and provisional; not a statutory, engineering, medical, procurement or investment document

The mechanism is anonymous need aggregation → model/rule candidate → spatial touchpoint → human decision → public review → pause or exit. It is deliberately bounded: no autonomous medical or safety decisions, no third-party logos or images, and no transfer of partner status.

What this page makes testable

- Eight ecosystem elements: land/space, industry, funding, talent, compute, data, scenes and governance.
- Ten scenario cards SC-01–SC-10 each specify input, model/rule, touchpoint, output, human duty, failure/appeal, privacy, KPI and exit.
- TP-01 accessibility and anonymous demand; TP-02 equipment/edge inference and maintenance; TP-03 event safety, fairness and public appeal.

Boundary and evidence

Seven mechanism references—ActiveSG, Japan community sports clubs, OpenActive, Strava Metro, PlaySight, Catapult and Barcelona Esports—are cited for mechanisms only, with independent URLs and rights boundaries.

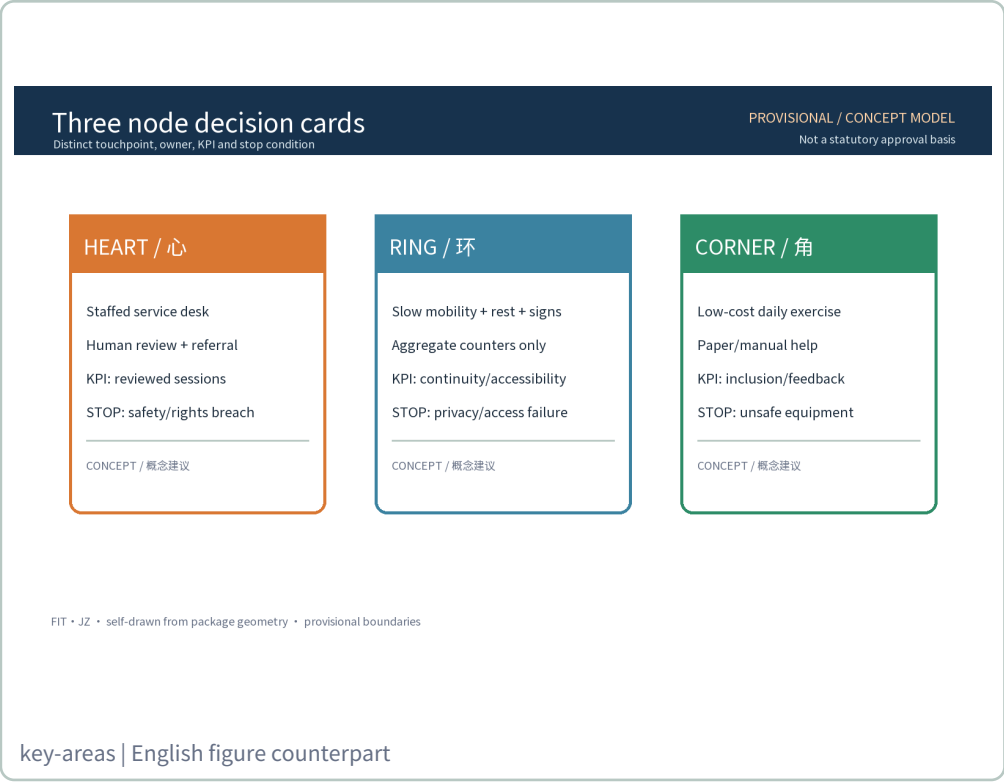

Rights and confidence: all figures are self-drawn; sources.json records independent URLs, licenses and prohibited uses. Official boundary, ownership, engineering, capacity, budget, clinical validity and operating relationships remain unknown or provisional.

6. Governance, operations and public accountability

FIT • JZ | English A3 booklet | substantial English counterpart of the Chinese delivery

PROVISIONAL / CONCEPT MODEL — conceptual and provisional; not a statutory, engineering, medical, procurement or investment document

Health information is not stored by default. Data minimization, purpose limitation, local aggregation, role-based access, short retention, deletion verification, re-identification prohibition, incident response and a public data register frame every pilot.

What this page makes testable

- RACI: authority—scope/accountability; community—co-design/appeal; professional reviewers—human decisions; operators—service/maintenance; developers—sandbox code; researchers—evaluation; users—consent/feedback/exit.
- Open operations: quarterly developer clinic, synthetic-data API dictionary, annual open-scenario call, instructor rotation, landmark maintenance log, accessible paper channel and conversion review.
- Phase 1 (1–3 years): co-design and removable pilots; Phase 2 (3–5): compare protocols and publish evidence; Phase 3 (5–10): portable rules, annual review and optional regional exchange.

Boundary and evidence

The package is offered for open review only. A human reviewer approves health-adjacent advice, safety alerts, publication and escalation. Any future change requires official data, accessibility and safety review, rights clearance and public consultation.

Rights and confidence: all figures are self-drawn; sources.json records independent URLs, licenses and prohibited uses. Official boundary, ownership, engineering, capacity, budget, clinical validity and operating relationships remain unknown or provisional.
