A HUNDRED SCHOOLS OF THOUGHT

Reshaping the AI Innovation Belt through Philosophical Debate

The AI Agora - English counterpart of a3-booklet.pdf

Three Academies + Debate Corridor + Evolution Nodes

1. Design Concept

The belt is a living Jixia Academy: three philosophical personas preside over three key areas, linked by a debate corridor, iterated through evolution nodes.

Zhongzhiyuan 192.1ha	Logician / rationalism	autonomous innovation + AI governance
AI Origin Community 104.3ha	Daoist / naturalism	organic growth, origin incubation
Dazhongsi 72.0ha	Mohist / pragmatism	scenario landing, industrial effect

Core principle: create spatial conditions for innovation to emerge naturally.

2. Three-Level Scope

Research 43.6 km² = Palace; Overall 11.4 km² = Halls; Key areas 368.4 ha = Arenas.

All boundaries provisional; recompute when official polygons are published.

3. Systems

Debate corridor width follows park conditions (conceptual); node spacing ~300m-order target (to survey).

East-west crossings = comparison topics (at-grade first); blue-green: two waters + one spine.

12 AI scenario cards (3 verification), 5 personas, 3 landmarks; governance rules + AI decision boundary.

4. Metrics (recomputable, EPSG:4548)

Site 11,412,825 m² / green 0.35 / public 0.18 (known). FAR & height unknown.

5. Phasing

Thesis 1-3y -> Debate 3-5y -> Sedimentation 5-10y; append-style evolution.

Conceptual proposals only; not statutory planning conclusions.
