

THE LIVED LINE

CENTENNIAL JING-ZHANG AI INNOVATION BELT

EVERY AI SCENARIO MUST PASS REAL LIFE FIRST

If AI cannot reduce a lived friction that has actually been observed, it should not occupy urban space.

OVERALL CONCEPT

One Lived Line and three Calibration Stations

PROVISIONAL BOUNDARY | CONCEPTUAL RECOMMENDATION | FIELD CALIBRATION PENDING

THE LIVED LINE

Every AI scenario must pass real life first

临时范围不代表真实地块 | Provisional geometry is not a surveyed parcel map

If AI cannot reduce a lived friction that has actually been observed, it should not occupy urban space.

3	Positionings	3	Calibration Cores
2	Service Wings	12	Lived Work Orders

SEVEN LIVED EVIDENCE GATES

G0	Boundary truth
G1	Lived friction
G2	Non-AI first
G3	Minimum increment
G4	Data restraint
G5	Human final say
G6	Retest and exit

Sources: Beijing official park reports; repository provisional geometry; author-generated design

SPATIAL STRUCTURE

Three scopes and an open calibration chain

PROVISIONAL BOUNDARY | CONCEPTUAL RECOMMENDATION | FIELD CALIBRATION PENDING

FROM THREE POSITIONINGS AND FIVE AREAS TO AN OPEN CALIBRATION CHAIN

The official framework states what belongs here; lived evidence governs how technology enters

Conceptual land-use partition | internal calculation under provisional boundary

Lived Line continuous park green space	16.8%
Model-to-world research and validation interface	9.5%
Public evaluation and useful-failure cultural interface	15.4%
University-linked open-source education interface	14.4%
Community service and civic-protocol interface	12.9%
Station-city industry and commercial-service interface	17.3%
Talent and community-life support interface	13.6%

THREE ZONES + TWO WINGS COLLABORATION LOOP

FOUR SPATIAL RESPONSIBILITIES IN THE ODA

Ratios are design scenarios, not approved controls; all are recalculated when official polygons arrive.

Sources: geometry/land_use.geojson; EPSG:4548 calculation; provisional boundary

KEY AREAS

Calibration, protocol, and retest

PROVISIONAL BOUNDARY | CONCEPTUAL RECOMMENDATION | FIELD CALIBRATION PENDING

THREE CALIBRATION STATIONS, NOT THREE TECHNOLOGY SHOWROOMS

Three zones hold industrial, civic, and station-city tests; two wings close the service-scenario loop

ZHONGZHIYUAN

Model-to-World Calibration Yard

INDUSTRY TEST

rain • night • crowd • offline • human takeover

MOBILITY AND BLUE-GREEN

Repair the city before opening an Agent

REPAIR THE CITY BEFORE OPENING AN AGENT

The Scenario Wing turns lived frictions into work orders while the blue-green network keeps a sensor-free alternative

PROVISIONAL BOUNDARY | CONCEPTUAL RECOMMENDATION | FIELD CALIBRATION PENDING

Conceptual alignments require official-road and field-data calibration

ENTRY ORDER AT EVERY NODE

01 PHYSICAL REPAIR

ramps • lighting • wayfinding • seats

02 OPERATING REPAIR

staffing • schedule • maintenance

03 MINIMUM AI

closure • status • aggregate alert

04 HUMAN ACCEPTANCE

never auto-declare completion

SENSOR-FREE ALTERNATIVE

static map + staffed help + printable route

METRICS AND EVIDENCE

Exit mechanisms and non-extrapolation

PROVISIONAL BOUNDARY | CONCEPTUAL RECOMMENDATION | FIELD CALIBRATION PENDING

METRICS ARE REVERSIBLE EVIDENCE, NOT A SCOREBOARD

Three positionings and five functions share one receipt: fact, non-AI control, AI increment, risk, and exit

LIVED EVIDENCE RECEIPT

01

OBSERVATION ID

02

FACT

03

NON-AI REPAIR

04

MINIMUM AI

05

HUMAN REVIEW

06

RETEST & EXIT

EXIT IS NOT FAILURE:
Stop scaling when non-AI repair works, risk is excessive, or human takeover fails.

12

Lived Work Orders

design count

TARGET ≥20

Field Observations

two walks pending

TARGET =0

Privacy-risk Photos

publication target

NO EXTRAPOLATION
Say ‘observed during two site walks,’ never ‘residents generally believe.’

TWELVE LIVED WORK ORDERS

Repair the city before opening an Agent

01 Entrance wayfinding non-AI repair → minimum AI → human review → exit	02 Night light, obstruction, and help non-AI repair → minimum AI → human review → exit	03 Walking-cycling-play conflict non-AI repair → minimum AI → human review → exit
04 Shade, water, and rest non-AI repair → minimum AI → human review → exit	05 Toilet and water status non-AI repair → minimum AI → human review → exit	06 Accessibility break non-AI repair → minimum AI → human review → exit
07 Delivery-worker pause and support non-AI repair → minimum AI → human review → exit	08 Family meeting and help non-AI repair → minimum AI → human review → exit	09 Quiet and activity zoning non-AI repair → minimum AI → human review → exit
10 Small-business trial interface non-AI repair → minimum AI → human review → exit	11 Event queues and crowding non-AI repair → minimum AI → human review → exit	12 Repair closure non-AI repair → minimum AI → human review → exit

THREE INDUSTRY TESTS AND THREE HONOR NODES

The city honors systems that can be corrected

TVS-01

Accessible last mile

TVS-02

Public-space maintenance

TVS-03

Embodied-AI co-movement

01

Useful Failure Depot

02

Open-Source Kilometer Zero

03

Human Final Say Pavilion

simulation → closed field → supervised trial → public review → annual reauthorization

IMPLEMENTATION, RISKS, AND STOP CONDITIONS

Evidence first • light and reversible • expand only after passing

FOUR RISKS

- Provisional boundary
- Field evidence pending
- Statutory and engineering gaps
- Privacy and public interest

FOUR IMMEDIATE STOP TRIGGERS

- boundary crossing or wrong route
- privacy complaint
- failed human takeover
- non-AI repair already works

SOURCES, ASSUMPTIONS, AND DECLARATION

Every appearance of precision must disclose its source and confidence

OFFICIAL SOURCES

- Open Call announcement
- Beijing Jing-Zhang park reports
- Registered standards snapshots

PROVISIONAL & DESIGN

- Provisional ODA and key-area geometry
- Author-generated GeoJSON and figures
- Two-walk field protocol

MUST BE CONFIRMED

- Official polygons and regulatory controls
- Ownership, buildings, utilities, fire and flood
- Operators, insurance, permits, and budget

This proposal claims no official approval, statutory plan, construction commitment, data-collection authorization, or testing permit.
